Download and install program

When the Video(PV) is black,

Download Reader DC 2020.012.20048 or help - check for updates and update to the latest version!

**When the Video(PV) sounds,
but the screen only shows
green wavelengths,**

If the system environment is Windows 10, open the reader DC program, press Ctrl+K (default setting), then unlock the security (Advanced) - Sandbox Protection - Enable Protected Mode (M) at startup, close and reopen the program, and the video(PV) will function normally.

product

PINYFINY

In an age where health is important, interest in optimal exercise has increased. For optimal exercise, we developed a system to accurately measure muscle strength according to the type of exercise.

- HHS Myo_module
- Log In
- Personal information screen
- Manage Membership
- Member's exercise method management
- EMG signal analysis

hopes your healthy and happy life.

brain wave SAFETY HELMET

To prevent and reduce industrial accidents, We develop safety monitoring management system using bio-signal(EEG) processing algorithm. Our system aims to respond quickly and accurately to accidents and disasters that occur at the accident site.

- 
- 
- New Risk Management Technology
 - HHS Risk Management System
 - Bio-signal based Safety Management System

We are a startup that
promotes human health
and happiness **using bio-signal processing techniques.**

PRODUCT 01

PINYFINY

In an age where health is important, interest in optimal exercise has increased.
For optimal exercise, we developed a system to accurately measure muscle strength according to the type of exercise.

- 01 Muscle Activity Measurement **attaching wireless EMG sensors** with regard to the point at which muscles are activated according to the type of exercise
- 02 A.I. based **EMG data analysis**
- 03 Correct posture, exercise range according to muscle fatigue, exercise **schedule management**
- 04 Monitoring **application** that **visualizes** analysis results and provides a total solution to customers
- 05 Scientific Approach to Exercises(muscle activity) with A.I. Based on analyzed big data, it is used for **rehabilitation** and **exercise education program**

PINYFINY

HHS Myo_module

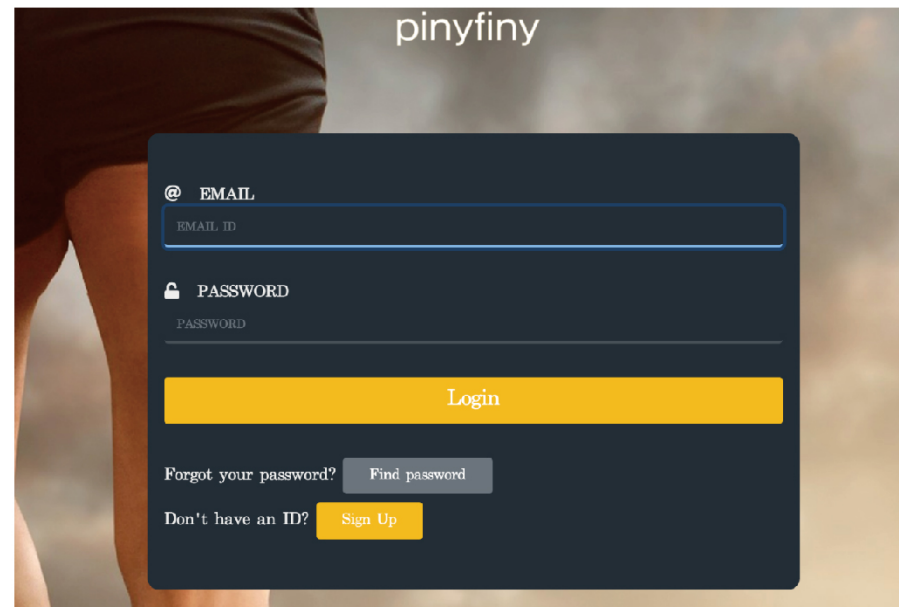

- Bluetooth based Wireless EMG Sensor
- Support 4 channels
- Include motion sensor(9 axis)
- Up to 8 hours

In an age where health is important, interest in optimal exercise has increased.
For optimal exercise, we developed a system to accurately measure muscle strength according to the type of exercise.

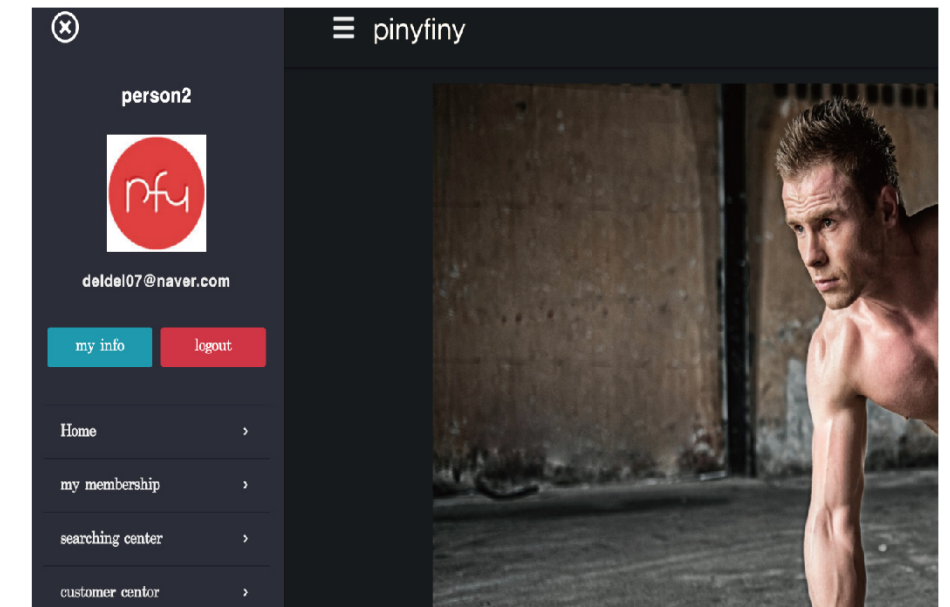

Log In

- Provide web services for trainers and members

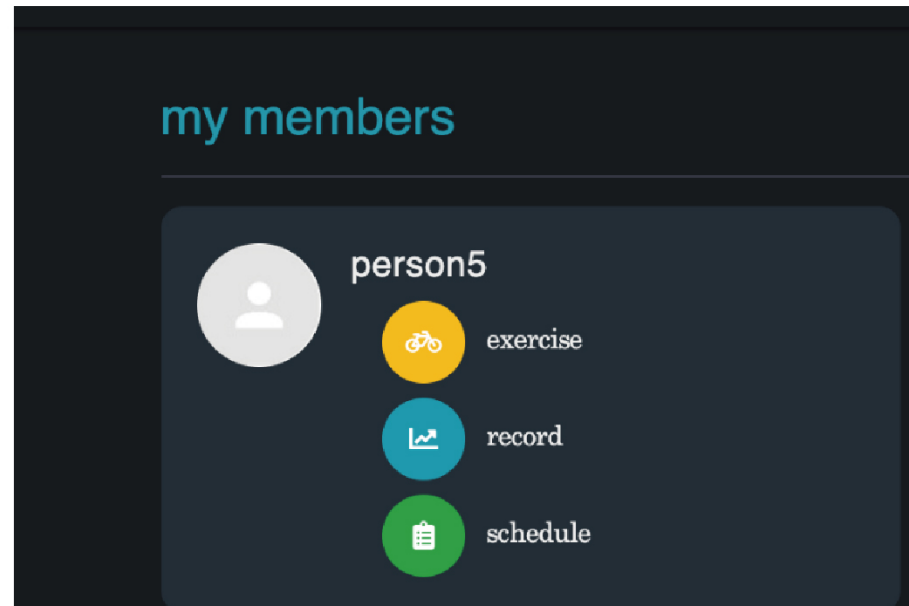

Personal information screen

- Personal information of trainer and members

Manage Membership

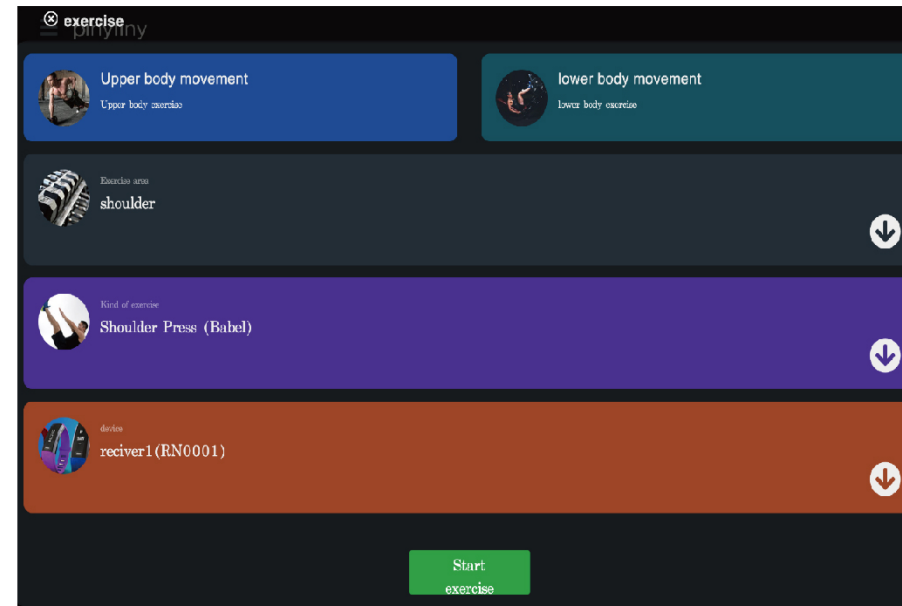

- Trainer can manage registered members

In an age where health is important, interest in optimal exercise has increased.
For optimal exercise, we developed a system to accurately measure muscle strength according to the type of exercise.

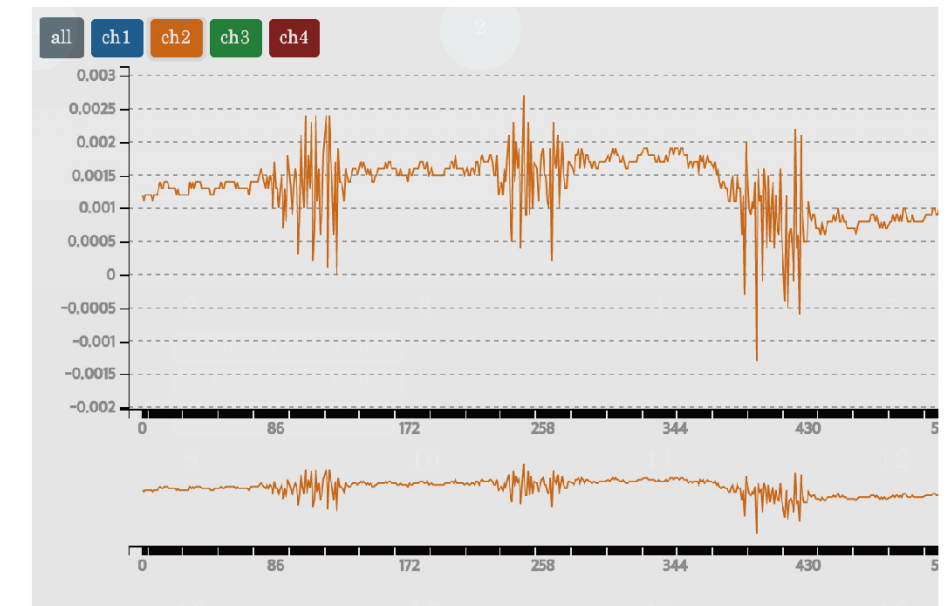

Member's exercise method management

- Trainer can suggest how to exercise to members

EMG signal analysis

- -The trainer can analyze the member's exercise posture more accurately through the analyzed graph

Perspective ◀ Orthographic ▶ Front Right Back Left

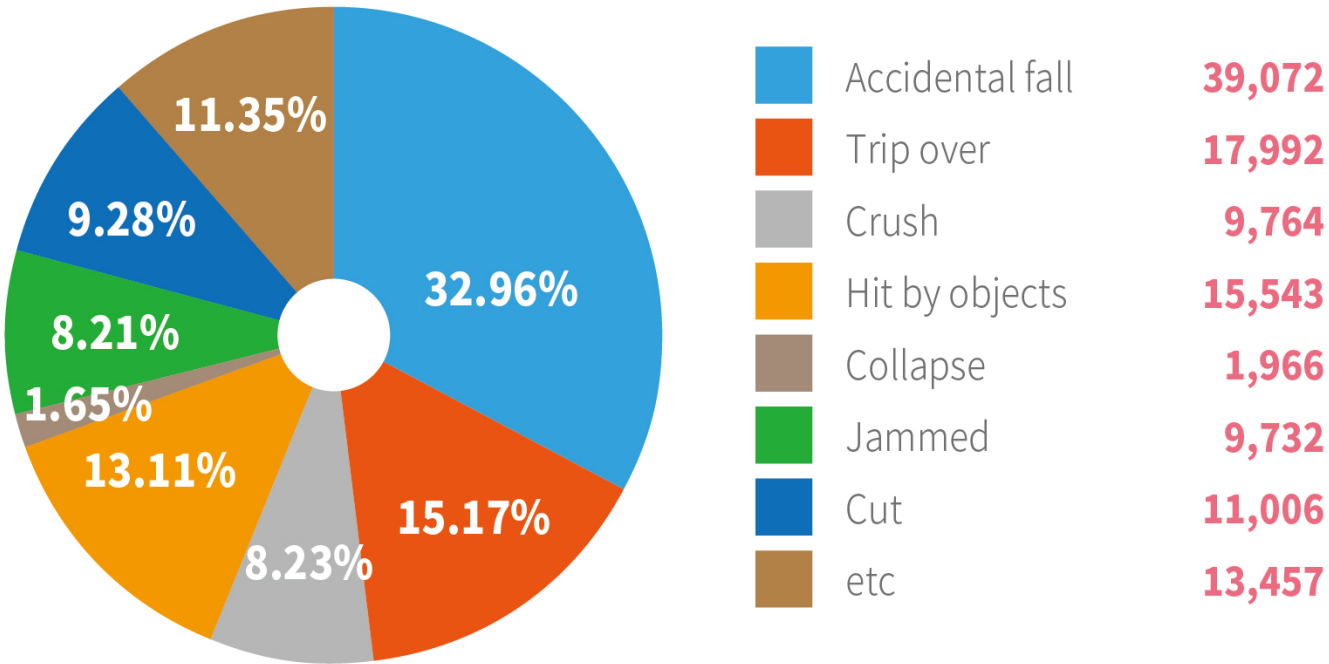

01. Increasing number of industrial disasters

- Industrial disasters in South Korea is constantly increasing (20 times of the UK and 4 times of the USA)
- The main cause of the accidents is the poor working condition

Industrial disaster rate, South Korea

Type	2016Y	Increasing rate (%)
Total number of industrial disasters	90,656	0.6
The number of injury from accidents	82,780	0.7
The number of injury from diseases	7,876	-0.5
The number of mortality	1,777	-1.8
The number of mortality from accidents	969	1.5
The number of mortality from diseases	808	-5.5

Ministry of Public Safety and Security accidents analysis

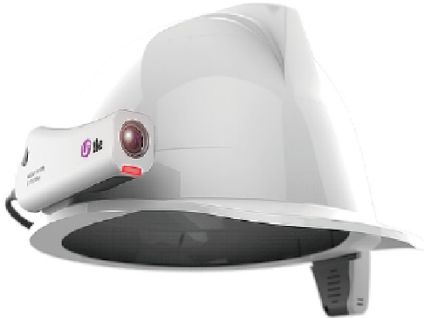

02. Existing Risk Management System

- Existing risk management system only detects external risk factors
- Accidents usually occur from lack of concentration or not wearing a helmet

Existing smart helmet functions

Company	Nexsys	Giga Tera KProduct MW	OTOS
Product			
Function	Camera Monitoring	LED light	Working hour display
Wearing detection	X	X	X
Fatigue level detection	X	X	X
Stress level detection	X	X	X

03. New Risk Management Technology

- A camera monitoring operators' eye closure and head movement was selected to use in haul trucks
- Guardvant Technology: 2016 Newmont mining company started to adopt the camera technology

Fatigue level detecting technology adoption

Newmont Selects GuardVant Technology for Fatigue Monitoring and Collision Avoidance

Guardvant, Inc. Sep. 8, 2016, 4:05 PM

TUCSON, Ariz., - September 6, 2016 - Newmont Ghana has selected GuardVant's fatigue monitoring, proximity detection and collision avoidance systems for its operating gold mines Akyem and Ahafo. By combining these safety technologies, Newmont expects a decrease in safety incidents and operating costs as well as an increase in equipment availability

Expected outcomes by Newmont

- Safety solutions
- A decrease in operating costs
- An increase in equipment availability

Guardvant Technology in Newmont's haul truck

출처: <http://www.mining.com/web/newmont-selects-guardvant-technology-for-fatigue-monitoring-and-collision-avoidance/>

Camera Technology Limitation

- (Late Detection) eye-closure from tiredness already means an operator is in a sleeping mode
- (Limited Range) fatigue level cannot be checked out of the truck or camera
- (Surrounding Effect) Lack of light at night or dusts in sites lower a quality of detection

Night working environment

HHS Risk Management System

HHS Neuro_Module

- Brainwaves sensor in helmets
- Communication modules

A.I. based EEG Analysis Server System

- AI based brainwaves analysis server

- Operators' weekly, monthly, annual analysis report

Safety Management Application (for manager)

- Real-time emergency situation alarm (drowsiness, metal fatigue, Seizure)

Satisfying needs for both workers and companies

Benefits for workers

- Reduction in industrial disasters
- Well balanced working conditions
- Increased productivity

Benefits for companies

- Higher company's branding image from a better risk management system
- An increase in production
- No need to check wearing helmet status for risk managers

PRODUCT 02

Bio-signal based Safety Management System

Pre-risk awareness

Prompt handling after an accident

Innovative development to safety management

01

IoT + Wearable + EEG signal processing
: **Real-time bio-signal analysis**

02

Replacement of exsisting paper charts by Smart Safety Management
: Breakthrough in Safety Management Efficiency

03

Detection within 1 minute abnormal state before accident and emergency state after accident

04

Optimization of intensity of labor by managing break time and stress
→ Reduction of accidents and **improvement of productivity**

PRODUCT 02

Bio-signal based Safety Management System

- This worker is not wearing a helmet.

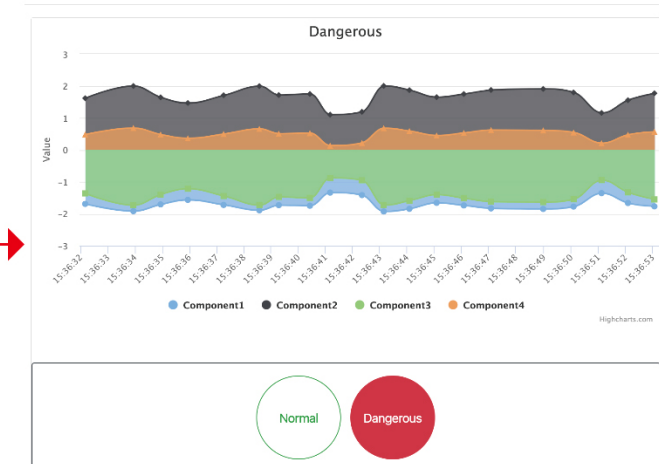

- This worker is wearing a helmet.
